ATLAS Q3 PLANNING READOUT

Delivery notes - July 18, 2026

Authentication

Planning note: Public authentication is active for Q3 and Marco Silva owns the rollout. Status: active.

This statement conflicts with the approved July 8 decision memo, which limits access to an employee-only beta and keeps the public rollout postponed. The planning group did not record an approval or supporting security evidence for its statement.

Offline model packaging

Decision: Do not bundle Ollama model weights in the application images. Status: active. Dana Wu owns setup documentation.

Reason: Model weights change independently and would make application images too large. Installation will use an explicit model-pull step.

Evaluation target

Decision: The expected source must appear in the top five retrieval results for at least 80 percent of answerable benchmark questions. Status: active. Elena Park owns acceptance.

Alternative considered: Report answer quality without a retrieval threshold. Status: rejected because generation metrics cannot reveal whether the correct evidence was retrieved.
